BASIC ELECTRICAL ENGINEERING			
(2019 Pattern) (Credit System) (Semester - II) (103004)			
	_	<b>2</b> 0, 6.	
Time: 1 Hour] Instructions to the candidates:			[Max. Marks: 30
Histi	1)	Answer Q.1 or Q. 2, Q. 3 or Q. 4.	1 6
	<i>2</i> )	Figures to the right indicate full marks.	.6
	<i>3)</i>	Neat diagrams must be drawn wherever necessary.	
	<i>4)</i>	Assume suitable data wherever necessary.	
	<i>5)</i>	Use of non-programmable calculator is allowed.	
Q1)	a)	Compare magnetic & electric circuit for simi	lar & dis similar points. [7]
	b)	Obtain the expression for coefficient of c	oupling (k) between two
		magnetically coupled coils. Comment on k. w	
		i) Two coils are tightly coupled and	
		ii) Magnetically isolated.	
		OR OR	
Q2)	a)	Compare dynamically induced emf & mutual	lly induced emf. [7]
	b)	Two magnetically coupled coils. A and B l	have 3000 and 3600 turns
		respectively. When independently considere	d, current of 10A in coll A
		produces flux of 5 mWb in it and current of 1	12A in coil B produces flux
		of 7.5 mWb in it. The 80% of the flux produce	d by coil A links with coil B.
			[8]
		Calculate:	
		Calculate.	
		i) Self-inductance of each coil	
		ii) Mutual inductance.	200
		iii) Coefficient of Coupling	
	1	iv) EMF induced in coil B if current in corl	A is uniformly reversed in
	-	0.5 seconds.	
		, in the second	
			<i>P.T.O.</i>

- **Q3)** a) Define the following terms: Waveform, cycle, frequency, periodic time, amplitude, average value. RMS value. [7]
  - Sinusoidal voltage is represented by  $v = 282.82 \sin (314.15 t)$ . b) [8]

Calculate:

- i) Maximum value of voltage
- ii) RMS value of voltage
- Average value of voltage iii)
- iv)
- Peak Factor
- Form Factor
- Time required for voltage to achieve 200 V first time after passing through zero and increasing positively

- Derive expression for relationship between RMS value and Maximum **Q4)** a) value of symmetrical sinusoidal voltage. Also sketch the waveform representing the relationship.
  - Three capacitors having capacitances 2 µF, 4 µF & 6 µF are connected b) 2 Parker of the state of the st in parallel across 200 V DC supply.

Calculate:

- Equivalent capacitance i)
- ii) Charge on each capacitor
- Voltage across each capacitor & iii)
- iv) Total energy stored.
